1. Purpose

This document defines how the Suzlon brand communicates across all touchpoints. It ensures consistency, clarity, and alignment with our role as a global leader of integrated energy systems. Our voice reflects who we are as a company and how we lead conversations in energy. A consistent voice will help us build trust, authority, and recognition.

2. The Voice Shift

Key shift in communication: We're moving from climate-focused conversations to energy-systems-focused ones, which will inevitably benefit the planet.

Old Suzlon: Climate action

New Suzlon: Renewable energy > Climate action

2.1 Voice Principles: From → To

Old Voice	New Voice
Declarative Stated facts without a client-centric context <i>Example:</i> Suzlon's promise of excellence is delivered on its range of services as with its range of wind turbines.	Infectiously Passionate We sound excited, involved , positive, and perseverant. <i>Example:</i> We combine our expertise in RE technology, EPC capabilities, and lifecycle support to simplify your transition to clean energy .
Technical-heavy Relied on jargon to communicate <i>Example:</i> Providing an all-encompassing solution to wind-energy projects in the form of Wind Turbine Generators (WTGs) that are infused with state-of-the-art technology from their blades, nacelles, towers and foundations.	Expert, Yet Accessible We sound knowledgeable , clear, and inclusive. <i>Example:</i> Intelligent turbine platforms that perform across geographies and wind regimes. Backed by in-house R&D and end-to-end manufacturing expertise .
Functional Focused on features over outcomes. <i>Example:</i> 3,900+ human capital deployed.	Warmly Personal We sound genuine, human, and caring . <i>Example:</i> 4,300+ Good Energy People taking care of your assets across sites.
Reactive Joined conversations instead of leading them.	Confidently Definitive, Now We sound assured , reliable, capable, and grounded.

Example: Why do we need renewable energy?

Example: Renewable energy is **key to energy security**.

2.2 Positioning Statement

A global full-stack renewable energy solutions conglomerate with businesses spanning RE Tech (Wind, Storage, Solar), RE Dev Co, RE Projects, and RE AMS, to make the new world work.

3. Tenets of Communication

3.1 Core Attributes

We act now

All action-led communication must be in the present.

Avoid: We **will make** the world a better place.

Use: We **make** the world a better place.

More examples:

- *Making energies good and progress real*
- *We reduce our carbon footprint with responsible choices.*

We speak without comparison

Unless absolutely necessary, we must not compete with anybody. All communications must reflect that we're secure in our achievements.

Avoid: India's largest wind energy service portfolio of 15.7+ GW.

Use: A leading 15,700+ MW service portfolio in India.

More examples:

- *One partner across wind, solar, storage and emerging technologies.*

Acceptable exceptions (certifications, awards, milestones):

S144 is among the world's lowest carbon footprint turbines at 6.17 gCO₂/kWh.

We are always human

Every communication must be for people, by people.

Avoid: **Suzlon's** unique 'end-to-end solutions' business approach is designed to take care of every aspect of wind energy **projects**.

Use: **Our** full-stack RE solutions are designed around **your** unique load profiles and commercial priorities.

More examples:

- *Renewable energy is the very foundation of human possibilities.*
- *We deliver dependable, affordable, and accessible energy wherever you are, whenever you want.*

3.2 Tone by Context

Context	Tone Expression
Corporate Communication	Informative, empathetic
Marketing & Campaigns	Clear, optimistic
Social Media	Sharp, relevant
Thought Leadership	Insightful, action-led
Internal Communication	Concise, inclusive

4. Language & Writing Style

4.1 Sentence Construction

- Use British English only.
- Use short to medium-length sentences.
- Prioritise active voice. Use passive voice sparingly.
- Avoid filler and redundancy. Speak less, say more.
- Use contractions wherever possible (it's, we're, they're, etc.).

5.2 Vocabulary Guidelines

- Avoid jargon and technical language unless necessary.
- Use simple words that anybody can understand.
- Avoid excessive qualifiers (very, extremely, prestigious, etc.).

- Use specific data; avoid abstract terms.
- Spell out acronyms and abbreviations on first use.
- Validate your claims with data points as much as possible.

4.3 Communicating Numbers

Use MW

Because MW is more specific for our business. Leave space after the figure and before ‘MW.’

Avoid: 21.7GW of installed wind capacity

Use: 21,700 MW of installed renewable energy capacity

Exception: Use GW only when referring to national targets, grid capacity, or industry reports.

Example:

- *Annual global renewable energy additions reached 692 GW in 2025.*
- *100 GW of wind capacity target.*

Numbers vs. spellings

Spell the number if the figure is below 10 and use numbers when it’s above 10.

Exception: If a number is at the start of a sentence, spell it out.

Example:

- *Thirty years ago, we pioneered wind energy in India.*

Dates

Avoid: June 18th, 2026 or 18-06-2026

Use: DD-Month-YYYY format

Example:

- *18 June 2026*
- *1 January 2027*

Time

Avoid: 10.30am or 18:00 hrs

Use: 12-hour clock with a space before AM/PM. Avoid adding '00' to o'clock times.

Example:

- 10:30 AM
- 6 PM
- 10:30 AM – 6 PM

Ranges

Avoid: Hyphen (-)

Use: En dash (–)

Example:

- 50–55%
- FY 2027–28 (*for absolute years, use FY27*)
- Pages 20–24

Currency

Be consistent with the currency format within the same document.

Use the symbols or alphabetic codes before the number. Both 'million' and 'lakh' are permissible formats, depending on the geography. Lakh is only recognised in India.

Example:

- ₹5 crore
- USD 10 million; INR 10 million
- €3 billion

4.4 Dos and Don'ts (Examples)

Do

- Speak with clarity and confidence.
- Connect energy to real-world impact.
- Lead conversations instead of following them.
- Be specific and concrete.

Don't

- Overcomplicate language
- Rely on generic sustainability clichés
- Sound passive or uncertain
- Default to corporate jargon

4.5 Signature Voice Markers

When in doubt, remember this is what makes Suzlon's voice distinct:

- We speak about building infrastructure and systems, not installing energy technology.
- Beyond the business case, we connect energy to the economy and society.
- We lead all our communication with tangible impact.
- We're the driver of change, not a participant. So, we speak like one.

4.6 Message length

Internal Communications	
Management letters	Up to 250 words
HR announcements	Up to 120 words
Orders, notices, updates, awards, surveys, ethics, misc.	Up to 80 words
Greetings/wishes	Up to 50 words
Trading notice	As required

SUZLON

Suzlon secures Zero Waste to Landfill and Single-Use Plastic Free certifications from IRClass

Dear Team,

It's always an honour to be recognised for our efforts towards being good for the world.

Our Manufacturing Business has recently received the Zero Waste to Landfill (ZWTL) and Single-Use Plastic (SUP) Free certifications from Indian Register Quality Systems (IRQS).

IRQS is a leading testing, inspection, and ISO certification solutions provider in India. They assessed 12 of our manufacturing facilities across components and awarded Suzlon under the 'Platinum' category for ZWTL.

With this certification, we've achieved our ZWTL by 2028 target two years before the deadline. Thank you to everyone for your support in making this milestone happen.

In addition, we secured the SUP Free certification for our unit-wide programs to eliminate single-use plastic on-site and in core manufacturing activities.

Let's take a moment to celebrate this good win!

MANAGEMENT SPEAKS

RAJENDRA MEHTA
Chief Human Resources Officer,
Suzlon Group

Asset Investment Group (AIG) 2.0 under Corporate Services

Dear Team,

We're moving ahead ambitiously towards our Suzlon 2.0, with a sizeable capex planned across our business verticals and locations.

To strengthen and expand Asset Investment Group (AIG)'s role in creating and managing future-ready assets/infrastructure globally, AIG 2.0 will operate under Corporate Services to support BUs and subsidiaries on infrastructure investments and lifecycle management.

Team updates

- Sudhir Bhujbal, Head - AIG, will thus report to GCFO Rahul Jain, under Vijay Asnani's mentorship.
- Aditya Pandey, Project Manager - Manufacturing, will have dual reporting to CEO Manufacturing Gurpratap Boparai and AIG Projects Head.
- Project Manager roles for IB Projects and GMS (currently vacant) will follow dual reporting to their respective BU Presidents and AIG Projects Head. In the interim, Sudhir will work closely with the BU Presidents to ensure continuity.

AIG updates

AIG 2.0 will function as an internal business partner to improve capital efficiency, standardisation, risk mitigation, and long-term value creation.

- Provide Corporate Services across BUs and Suzlon subsidiaries for investment planning, development, and management of infrastructure requirements.
- Understand Suzlon's vision and BU-specific infrastructure needs in line with business plans, with a 3 to 5-year look-ahead planning horizon.
- Develop standardised infrastructure templates and typologies to drive uniformity, efficiency, and scalability across locations.

We wish Sudhir the very best in his expanded role as a part of Corporate Services.

 CIRCULARITY: SCALING CLIMATE ACTION FOR NET -ZERO FUTURE 	8 words
--	-----------------------

 Suzlon Group @Suzlon · Jun 12 The future of clean energy is integrated, dependable, and intelligent. In this conversation with The Core Report, Vice Chairman Girish Tanti discusses Suzlon 2.0's role in the next phase of the energy transition. Listen to the full discussion here: youtube.com/watch?v=rt-xV2...	40 words
--	------------------------

Message from CMD The world is asking more of renewable energy than ever before. As its demands grow, so does our responsibility to deliver energy that people can depend on. That responsibility begins long before a turbine starts generating power, with every decision we make about designing, manufacturing, operating, protecting one another, and caring for the environments we operate in. I believe all our decisions should be guided by a simple principle: My People, My Society, My Globe. We start with 'My People' because your and your colleagues' health, safety, and well-being must always come first. 'My Society' is for the communities we serve and the environments we operate in. Every action we take should leave a positive impact, not an unintended consequence. And finally comes 'My Globe.' It's our responsibility to minimise our environmental footprint while ensuring the future is fuelled by clean energy. When we get these right, stronger business performance naturally follows. Trust is earned. Quality is improved. Risks are reduced. That's good impact in action. As a leading global renewable energy solutions conglomerate, our standards must continue to set the benchmark for the industry. Every employee, contractor, supervisor and leader has a role to play in strengthening our culture. Let's remember these as not separate priorities but the foundation of how we make good energies that work. This is how we deliver good impact for our business, for society, and for generations to come. Regards, Vinod Tanti	235 words

5. Messaging Architecture

Every communication should contain only two messages, and three if absolutely necessary. The goal is to communicate for retention and impact, not just for visibility.

5.1 Core Themes

- Good energies to make the new world work
- Geopolitics and energy security
- Full-stack renewable energy for industrial growth
- Round-the-clock clean energy for global energy transition
- India's leadership in global energy (*only for India-specific communication*)
- Clean energy for advancing communities
- Advancing Suzlon in view of the global context

5.2 Communication Structure

In every communication, clearly define:

- The context/challenge/the need (*in no more than 2 sentences*)
- Suzlon's role in enabling or leading change
- The system-level impact of Suzlon's action

Example:

- *Industries today need clean energy ecosystems that are firm, flexible and tailored to changing realities. That's why we bring together renewable energy expertise across wind, solar, storage and emerging technologies under one roof.*

Sometimes, the challenge and impact may be implied for shorter, more impactful messaging.

Example:

- *Wind 2.0 – because the energy transition needs wind that's smarter.*

6. Voice in Practice

6.1 Before vs After

Example 1

Before	After
--------	-------

The Suzlon Group aims to make renewable energy both simple and cost effective for customers. In fact, Suzlon pioneered the 'Concept to Commissioning' model in wind energy, enabling it to meet the breadth and depth of customer requirements across the renewable energy value chain.	The world needs clean energy that's dependable and accessible. We make renewable energy systems perform with greater continuity, visibility, and long-term value. From 'Concept to Commissioning,' as we call it. Always good, always smart.
---	--

Example 2

Before	After
Suzlon is emerging as the 'foremost flag-bearer' of the green energy sector. The Union Government of India has accorded top priority to the generation of renewable energy, and this has led to a favourable policy environment at the centre as well as at the state-level. Suzlon, as a leader in the sector, is perfectly poised to tap the huge potential for new business – and create immense shareholder value.	Through policy changes, geopolitical uncertainties, and climate challenges, we've never strayed from our purpose of creating a healthier world. Now, we're powering humanity's ever-growing ambitions with affordable, accessible, and dependable clean energy solutions. Good for business, great for economies.

Example 3

Before	After
Suzlon is an equal opportunity employer. Through an invigorating work environment, ample learning opportunities and attractive benefits, the company grooms its employees to be the ambassadors of a sustainable tomorrow.	Here, you get to push your thinking, apply your capabilities, and challenge the norms. Our inclusive growth opportunities hone you into your best self, so you can do your best work.

7. Writing Checklist

Before publishing any content, ask:

- Is this clear and easy to understand?
- Does it reflect leadership or just information?
- Does it connect to a larger system or impact?
- Is the language direct and purposeful?
- Would this stand out in the industry, or would it blend in?

8. Governance

8.1 Ownership

Corporate Communications is the sole owner of the Brand Voice Guide. Any deviation must be reported to the **Head of Corporate Communications or their immediate reportee** before publication.

8.2 Application

This Brand Voice Guide is applicable across all communication channels:

- Marketing and public relations
- Corporate communication
- Digital platforms
- Internal communication

8.3 Updates

This Brand Voice Guide is a living document and will evolve with the brand.
